

FISH CLEANING & BAIT PREP TABLE

The all aluminum, corrosion proof fish table comes standard with a brown powder coat finish. It features a polymer cutting top insert, which is easy on your knives and helps keep them sharp. The wet-top design features a continuous valve controlled flow of flushing water onto the cutting surface to keep it free of fish scales, blood, and debris. The waste then flows into the front tray and down the anodized aluminum support legs and into the water under the dock. This keeps fish and bait debris from sticking to the cutting surface. The tables are designed to save dock space by mounting over the edge of the dock; great for marinas, private docks, and public piers. Installation is quick and easy!

Specifications: Length: 54" Width: 22.5" Height: 36"
